the community is dispersed. In the outlying parts, as far as 2 miles from the center (see map 1), the houses are scattered between the paddies or farm lands in sections which form subvillages or wards. As mentioned above, settlers from the south took up residence in these areas. Recently families from the main village have also moved to the more remote parts of the community, such as Udenaha, because they can reach their fields more conveniently. Although the name Taira refers to the political unit of main village and outlying parts, including Udenaha and Izena, most references in this study pertain only to the central community. Its 60 households, with about 330 individuals, form the primary social unit from which the sample of 24 children was chosen.

Central Taira nestles along the inner shore of Taira Bay, which opens into the Pacific Ocean. At this point the median range mountains recede from the coastline. Behind the village, rice paddies spread in a crazed pattern at the bottom and on the terraced sides of several valleys which are separated from each other by sparsely wooded hills. Here and there the red earth of an eroded section shows like a scab through the green slopes.

In traveling by road from the south, most people choose the highway along the East China Sea coast, which is connected with the road which crosses the island. Higashi township is entered through a low saddle in the mountains which separate the two coastlines. To the right and left begins Taira's forest. Central Taira is reached through a winding lane bordered by pine trees. To the left the view opens into one of the neatly cultivated rice fields, backed by the hills on whose flat tops and terraced sides village people cultivate their farm lands.

The central village itself lies on a sand bluff, separating the valley from the ocean, so that there is a slight drop toward both sides (see map 2). The main road runs the length of the village. Except for the thoroughfare, which is dirt and gravel, the side roads are not surfaced, and after heavy rains puddles form and remain for more than a day, to the delight of children who play in them.

When Taira was destroyed during World War II, along with its houses went much of the foliage which once served as a windbreak. A few fukugi trees * line the main street, and hibiscus hedges here and there hide some of the houses from a first inspection. There are bushes around the edges of the village.

The war-time destruction is hardly apparent on a first walk through the village. Along the main street, lined by houses, one finds the rice mill, a substantial new building of concrete and wood, the police sta-

* A small- to medium-sized evergreen tree with a narrow, upright, very dark green crown of leaves.

Taira

tion, a frame wood building, and the main store. On the eastern end of the village the road opens into a little square in front of the simple, open prayer house with a small concrete shrine in back, housing three sacred stones. Beyond these is the township office crowned by a mighty pine tree of tremendous and symmetric proportions, acclaimed by Taira people to be the oldest existing pine in Okinawa. Across from the office are the post office and the dispensary.

Closer inspection of the village shows former house sites which were not rebuilt. Some still have empty concrete shells or single concrete walls and abandoned pigsties or storage sheds. Some of the vacant lots are used as potato fields, others as play areas, the favorite being a large house lot surrounded by a concrete wall, near the main store.

Houses are set back a short distance from the roads and paths, and most face south. In spite of the hedges and trees, the house is easily accessible from the street—its orientation is therefore toward the community as a whole and, as will be seen later, open to visitors who can enter freely without going through winding garden paths and knocking on doors or entering through long corridors and passages. Each house lot is small, ranging from 1300 to 6050 square feet. Houses are set so close to each other that neighborly conversations from one to the other can be conducted without leaving one's premises. Although some privacy is attained by the hibiscus hedges and fences, few secrets can be kept from neighbors.

There are several focal areas where people frequently meet and interact. The main store is a geographical center. Its two bulletin boards make it a natural congregating point. The banyan tree, overshadowing the village office and the lower water tank, is another such place, and on any day of the year scores of children can be found on or under it. In prewar times it was flanked by important structures, but now the empty lots, which are adjacent, form a green which is used on good days for village meetings.

South of this green, and close to the water, stands the old warehouse, a concrete structure with tile roof which once served as a storage center for agricultural products shipped south by boat; now it serves as a village meeting playground, especially on rainy days. The open space around it, bordering on the sea wall, is also used as a play area and as a gathering place for young adults. Here people prepare firewood for sale and stack it to be picked up by the village truck. Houses once stood near the 10-foot sea wall but were not rebuilt after the war.

To the north of the store lies the upper water tank. Until several standing faucets were installed in 1955, this used to be another place where people met frequently. Water is diverted from a stream a mile
